Syntax highlighting for Sublime Text

- Make sure you have Sublime 3 installed by checking that the build number is "Build 3126" or higher.
- From the top menu, select:
  Sublime Text: Preferences: Package Control
- When the command prompt appears, type
  "Install Package"
  which will cause the prompt to display a list of packages (give it a 1/2 second of so to appear)

Babel for React

1. With the list of packages showing, type
   "**Babel**", select Babel and then hit return to install it.
2. Restart Sublime
3. Go to View tab and select 'Syntax'
4. You'll now see an option named 'Babel' with two options -- JavaScript or JSON. Select JavaScript

https://github.com/babel/babel-sublime/issues/327

Vue

1. With the list of packages showing, type
   "**Vue**", select Vue Syntax Highlighting (or Vue Component) and then hit return to install it.
2. Restart Sublime
3. Go to View tab and select 'Syntax'
4. You'll now see an option named Vue
